Thank you to Hope Steele for her superb copyediting work and Neil Weinberg for his excellent interior graphic design and layout.

We are very grateful to Kamal Kamaoui and the World Economic Forum's Publications team for their invaluable collaboration on the production of this *Report*.

In addition we extend a special thank you to Miguel Perez at the World Economic Forum for his vital contribution to programming related to index calculations and country profiles.

The terms *country* and *nation* as used in this report do not in all cases refer to a territorial entity that is a state as understood by international law and practice. The term covers well-defined, geographically self-contained economic areas that may not be states but for which statistical data are maintained on a separate and independent basis.

Preface

KLAUS SCHWAB, Founder and Executive Chairman, World Economic Forum

SAADIA ZAHIDI, Director, Constituent Communities, World Economic Forum

We are at a unique turning point in history. Never before has there been such momentum around the issue of gender parity on the global stage. Numerous multinational companies have aligned core elements of their businesses and products to support and provide opportunities for women in the communities in which they are active. The United Nations has created a new entity for gender equality and the empowerment of women. There is a strong movement around greater investment in girls' education in the developing world. Businesses around the world are starting to take into account the increasing power of women consumers. As women begin to make up more than half of all university graduates in much of the developed world, there is an increased consciousness that this talent must be given the opportunity to lead. Several countries have introduced legislation that mandates minimum requirements for women's participation, in both business and politics.

The World Economic Forum has been among the institutions at the forefront of driving this change in mindset and practice, primarily by emphasizing the message that gender gaps have an impact on competitiveness and by engaging the business community. Measuring the size of the problem is a prerequisite for identifying the best solutions. Through the *Global Gender Gap Reports*, for the past five years, the World Economic Forum has been quantifying the magnitude of gender-based disparities and tracking their progress over time. By providing a comprehensive framework for benchmarking global gender gaps, the *Report* reveals those countries that are role models in dividing resources equitably between women and men, regardless of their level

of resources. In 2008, we launched our Global Gender Parity Group and Regional Gender Parity Groups in Latin America, the Middle East, Africa and Asia. To date, these multi-stakeholder communities of highly influential leaders—50% women and 50% men—from business, politics, academia, media and civil society have jointly identified the biggest gaps in each region, based in part on the findings of this *Report*, and have collectively committed to strategies to improve the use of female talent. The Global Agenda Council on the Gender Gap, an expert council, has used the insights of this *Report* to propose the creation of an online repository of information on best practices to close gaps in economic participation, education, health and political empowerment. There is also the impact we cannot measure—the countless universities, schools,

researchers, media entities, businesses, governments and individuals that use this *Report* as a resource for their work.

We would like to express our deep appreciation to Ricardo Hausmann, Director, Center for International Development, Harvard University and Laura D. Tyson, S.K. and Angela Chan Professor of Global Management University of California, Berkeley, USA for their invaluable contribution to this *Report*. We would also like to thank Yasmina Bekhouche for her research assistance and Marc Cuénod and Eimear Farrell for their support on this project at the World Economic Forum.

The Global Gender Gap Index was created with the specific purpose of being comparable across time. The 2010 *Report* aggregates five years of data and seeks to reveal country progress in a transparent manner. By doing this, we hope this *Report* will serve as a call to action to the international community to pool its knowledge and resources and to leverage the current unique window of opportunity so that faster progress can be achieved. Every moment that we wait entails colossal losses to the global society and economy.

Part 1

Measuring the Global Gender Gap

The Global Gender Gap Index 2010

RICARDO HAUSMANN, Harvard University

LAURA D. TYSON, University of California, Berkeley

SAADIA ZAHIDI, World Economic Forum

The Global Gender Gap Index,¹ introduced by the World Economic Forum in 2006, is a framework for capturing the magnitude and scope of gender-based disparities and tracking their progress. The Index benchmarks national gender gaps on economic, political, education- and health-based criteria, and provides country rankings that allow for effective comparisons across regions and income groups, and over time. The rankings are designed to create greater awareness among a global audience of the challenges posed by gender gaps and the opportunities created by reducing them. The methodology and quantitative analysis behind the rankings are intended to serve as a basis for designing effective measures for reducing gender gaps.

The first part of this chapter reviews the underlying concepts employed in creating the Global Gender Gap Index and outlines the methods used to calculate the Index. The second part of this chapter presents the 2010 rankings, global patterns and regional performance and calls attention to notable country cases. Next, we provide an overview of the links between gender gaps and the economic performance of countries. In the fourth part of this chapter, we have also provided information on the trends revealed by the Index in the five years that we have been producing it.

The Country Profiles contained in Part 2 of this *Report* give a more detailed picture of the relative strengths and weaknesses of each country's performance compared with that of other nations. The first page of each profile contains detailed information on over 30 gender-related variables, presenting both the original data used to create the Index and other variables that reflect some of the legal and social factors affecting gender disparity in each country. The second page of the profile, introduced for the first time this year, reveals the trends displayed over the last five years in the indicators used to produce the Global Gender Gap Index.

Measuring the Global Gender Gap

Three underlying concepts

There are three basic concepts underlying the Global Gender Gap Index. First, it focuses on measuring gaps

rather than levels. Second, it captures gaps in outcome variables rather than gaps in means or input variables. Third, it ranks countries according to gender equality rather than women's empowerment. These three concepts are briefly outlined below. For a description of how these concepts are captured by the construction techniques used in the creation of the Index, please see the section below on the *Construction of the Index*.

Gaps vs. levels

The Index is designed to measure gender-based gaps in access to resources and opportunities in individual countries rather than the actual levels of the available resources and opportunities in those countries. We do this in order to make the Global Gender Gap Index independent from countries' levels of development. In other words, the Index is constructed to rank countries on their gender gaps, not on their development level. For example, rich countries have more education and health opportunities for all members of society and measures of education levels thus mainly reflect this well-known fact, although it is quite independent of the gender-related issues faced by each country at its own level of income. The Global Gender Gap Index, however, rewards countries for smaller gaps in access to these resources, regardless of the overall level of resources. Thus the Index penalizes or rewards countries based on the size of the gap between male and female enrolment rates, but not for the overall levels of education in the country.

Outcomes vs. means

The second basic concept underlying the Global Gender Gap Index is that it evaluates countries based on outcome variables rather than input measures. Our aim is to provide a snapshot of where men and women stand with regard to some fundamental outcome variables related to basic rights such as health, education, economic participation and political empowerment. Variables related to country-specific policies, culture or customs—factors that we consider to be “input” or “means” variables—are not included in the Index, but they are displayed in the Country Profiles. For example, the Index includes a variable comparing the gap

The Global Gender Gap Index, co-authored by Fiona Greig, Ricardo Hausmann, Laura D. Tyson and Saadia Zahidi, was first introduced in the World Economic Forum's *Global Gender Gap Report 2006*. The authors are deeply grateful to Yasmina Bekhouche and Eimear Farrell for their excellent research assistance for this chapter.

between men and women in high-skilled jobs such as legislators, senior officials and managers (an outcome variable) but does not include data on length of maternity leave (a policy variable).

Gender equality vs. women's empowerment

The third distinguishing feature of the Global Gender Gap Index is that it ranks countries according to their proximity to gender equality rather than to women's empowerment. Our aim is to focus on whether the gap between women and men in the chosen variables has declined, rather than whether women are "winning" the "battle of the sexes". Hence, the Index rewards countries that reach the point where outcomes for women equal those for men, but it neither rewards nor penalizes cases in which women are outperforming men in particular variables.

The four pillars

The Global Gender Gap Index examines the gap between men and women in four fundamental categories: *economic participation and opportunity*, *educational attainment*, *health and survival* and *political empowerment*. Table 1 displays all four of these subindexes and the 14 different variables that compose them, along with the sources of data used for each.

Economic participation and opportunity

This area is captured through three concepts: the participation gap, the remuneration gap and the advancement gap. The participation gap is captured through the difference in labour force participation rates. The remuneration gap is captured through a hard data indicator (ratio of estimated female-to-male earned income) and a qualitative variable calculated through the World Economic Forum's Executive Opinion Survey (wage equality for similar work). Finally, the gap between the advancement of women and men is captured through two hard data statistics (the ratio of women to men among legislators, senior officials and managers, and the ratio of women to men among technical and professional workers).

Educational attainment

In this category, the gap between women's and men's current access to education is captured through ratios of women to men in primary-, secondary- and tertiary-level education. A longer-term view of the country's ability to educate women and men in equal numbers is captured through the ratio of the female literacy rate to the male literacy rate.

Health and survival

This category attempts to provide an overview of the differences between women's and men's health. To do this, we use two variables. The first variable included in this subindex is the sex ratio at birth. This variable aims

specifically to capture the phenomenon of "missing women" prevalent in many countries with strong son preference. Second, we use the gap between women's and men's healthy life expectancy, calculated by the World Health Organization. This measure provides an estimate of the number of years that women and men can expect to live in good health by taking into account the years lost to violence, disease, malnutrition or other relevant factors.

Political empowerment

This category includes mainly measures of the gap between men and women in political decision-making at the highest levels. This concept is captured through the ratio of women to men in minister-level positions and the ratio of women to men in parliamentary positions. In addition, we include the ratio of women to men in terms of years in executive office (prime minister or president) in the last 50 years. A clear drawback in this category is the absence of any variables capturing differences between the participation of women and men at local levels of government. Should such data become available at a global level in future years, they will be considered for inclusion in the Global Gender Gap Index.

Construction of the Index

The Global Gender Gap Index is constructed using a four-step process, outlined below.

Convert to ratios

First, all data are converted to female/male ratios. For example, a country with 20% of women in ministerial positions is assigned a ratio of 20 women /80 men = 0.25 on this variable. This is to ensure that the Index is capturing gaps between women's and men's attainment levels, rather than the levels themselves.

Truncate data at equality benchmark

As a second step, these ratios are truncated at the "equality benchmark". On all variables, except the two health variables, this equality benchmark is considered to be 1, meaning equal numbers of women and men. In the case of the sex ratio at birth, the equality benchmark is set to be 0.944,² and the healthy life expectancy benchmark is set to be 1.06.³ Truncating the data at the equality benchmarks for each variable translates to assigning the same score to a country that has reached parity between women and men and one where women have surpassed men.

The type of scale chosen determines whether the index is rewarding women's empowerment or gender equality.⁴ To capture gender equality, two possible scales were considered. One was a *negative-positive scale* capturing the size and direction of the gender gap. This scale essentially penalizes either men's advantage over women or women's advantage over men, and gives the highest points

Table 1: Structure of the Global Gender Gap Index

Subindex	Variable	Source
Economic Participation and Opportunity	Ratio: Female labour force participation over male value	International Labour Organization, <i>Key Indicators of the Labour Market</i> , 2009
	Wage equality between women and men for similar work (converted to female-over-male ratio)	World Economic Forum, Executive Opinion Survey 2010
	Ratio: Estimated female earned income over male value	United Nations Development Programme, <i>Human Development Report 2009</i> , 2007 or latest data available
	Ratio: Female legislators, senior officials and managers over male value	International Labour Organization, <i>LABORSTA Internet</i> , online database, 2008 or latest data available; United Nations Development Programme, <i>Human Development Report 2009</i> , the most recent year available between 1999 and 2007
	Ratio: Female professional and technical workers over male value	International Labour Organization, <i>LABORSTA Internet</i> , online database, 2008 or latest data available; United Nations Development Programme, <i>Human Development Report 2009</i> , the most recent year available between 1999 and 2007
Educational Attainment	Ratio: Female literacy rate over male value	UNESCO Institute for Statistics, <i>Education Indicators</i> , 2008 or latest data available; World Bank's <i>World dataBank: World Development Indicators & Global Development Finance</i> , online database, 2008 or latest available data; United Nations Development Programme, <i>Human Development Report 2009</i> , the most recent year available between 1999 and 2007
	Ratio: Female net primary level enrolment over male value	UNESCO Institute for Statistics, <i>Education Indicators</i> 2009 or latest data available; World Bank's <i>World dataBank: World Development Indicators & Global Development Finance</i> , online database, 2009 or latest available data
	Ratio: Female net secondary level enrolment over male value	UNESCO Institute for Statistics, <i>Education Indicators</i> 2009 or latest data available; World Bank's <i>World dataBank: World Development Indicators & Global Development Finance</i> , online database, 2009 or latest available data
	Ratio: Female gross tertiary level enrolment over male value	UNESCO Institute for Statistics, <i>Education Indicators</i> , 2009 or latest data available; World Bank's <i>World dataBank: World Development Indicators & Global Development Finance</i> , online database, 2009 or latest available data
Health and Survival	Sex ratio at birth (converted to female-over-male ratio)	Central Intelligence Agency, <i>The CIA World Factbook</i> , data updated bi-weekly, 2010
	Ratio: Female healthy life expectancy over male value	World Health Organization, <i>Global Health Observatory</i> , data from 2007
Political Empowerment	Ratio: Women with seats in parliament over male value	Inter-Parliamentary Union – <i>National Women in Parliaments</i> , 31 July 2010; United Nations Development Programme, <i>Human Development Report 2009</i> , as of 28 February 2009
	Ratio: Women at ministerial level over male value	Inter-Parliamentary Union, <i>Women in Politics: 2010</i> , up to January 2010
	Ratio: Number of years with a female head of state or government (last 50 years) over male value	World Economic Forum calculations, as of 31 June 2010

to absolute equality. The second was a *one-sided scale* that measures how close women are to reaching parity with men but does not reward or penalize countries for having a gender gap in the other direction. Thus it does not reward countries for having exceeded the parity benchmark. We find the one-sided scale more appropriate for our purposes.

Calculate subindex scores

The third step in the process involves calculating the weighted average of the variables within each subindex to create the subindex scores. Averaging the different variables would implicitly give more weight to the measure that exhibits the largest variability or standard deviation. We therefore first normalize the variables by

Table 2: Calculation of weights within each subindex

Economic Participation and Opportunity Subindex	Standard deviation	Standard deviation per 1% point change	Weight
Ratio: Female labour force participation over male value	0.160	0.063	0.199
Wage equality between women and men for similar work (converted to female-over-male ratio)	0.103	0.097	0.310
Ratio: Estimated female earned income over male value	0.144	0.069	0.221
Ratio: Female legislators, senior officials and managers over male value	0.214	0.047	0.149
Ratio: Female professional and technical workers over male value	0.262	0.038	0.121
TOTAL			1
Educational Attainment Subindex	Standard deviation	Standard deviation per 1% point change	Weight
Ratio: Female literacy rate over male value	0.145	0.069	0.191
Ratio: Female net primary level enrolment over male value	0.060	0.166	0.459
Ratio: Female net secondary level enrolment over male value	0.120	0.083	0.230
Ratio: Female gross tertiary enrolment over male value	0.228	0.044	0.121
TOTAL			1
Health and Survival Subindex	Standard deviation	Standard deviation per 1% point change	Weight
Ratio: Female healthy life expectancy over male value	0.023	0.441	0.307
Sex ratio at birth (converted to female over male ratio)	0.010	0.998	0.693
TOTAL			1
Political Empowerment Subindex	Standard deviation	Standard deviation per 1% point change	Weight
Ratio: Women with seats in parliament over male value	0.166	0.060	0.310
Ratio: Women at ministerial level over male value	0.208	0.048	0.247
Ratio: Number of years of a female head of state (last 50 years) over male value	0.116	0.086	0.443
TOTAL			1

equalizing their standard deviations. For example, within the educational attainment subindex, standard deviations for each of the four variables are calculated. Then we determine what a 1% point change would translate to in terms of standard deviations by dividing 0.01 by the standard deviation for each variable. These four values are then used as weights to calculate the weighted average of the four variables. This way of weighting variables essentially allows us to make sure that each variable has the same relative impact on the subindex. For example, a variable with a small variability or standard deviation, such as primary enrolment rate, gets a larger weight within the educational attainment subindex than a variable with a larger variability, such as tertiary enrolment rate. Therefore, a country with a large gender gap on primary education (a variable where most countries have achieved near-parity between women and men) will be more heavily penalized. Similarly, within the health and survival subindex, in the case of the sex ratio variable, where most countries have a very high sex ratio and the spread of the data is small, the larger weight will penalize more heavily those countries that deviate from this value. Table 2 displays the values of the weights used in the Global Gender Gap Index 2006.⁵

Calculate final scores

In the case of all subindexes, the highest possible score is 1 (equality) and the lowest possible score is 0 (inequality), thus binding the scores between inequality and equality

benchmarks.⁶ An un-weighted average of each subindex score is taken to create the overall Global Gender Gap Index score. As in the case of the subindexes, this final value is bound between 1 (equality) and 0 (inequality), thus allowing for comparisons relative to ideal standards of equality in addition to relative country rankings.⁷ The equality and inequality benchmarks remain fixed across time, allowing the reader to track individual country progress in relation to an ideal standard of equality. Furthermore, we hope that the option of roughly interpreting the final Index scores as a percentage value that reveals how much of the gender gap a country has closed makes the Index more intuitively appealing to readers.⁸

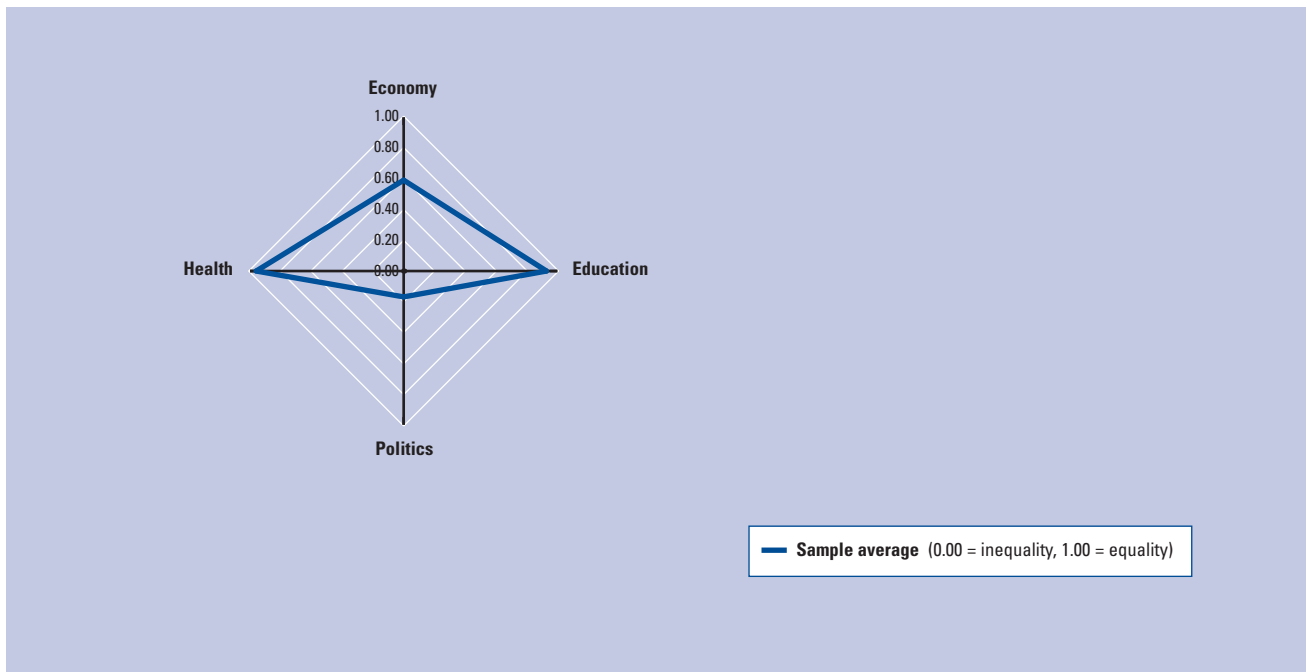

The Global Gender Gap Index 2010 rankings

We aim to include a maximum number of countries in the *Report* every year, within the constraints posed by data availability. To be included in the *Report*, a country must have data available for a minimum of 12 indicators out of the 14 that enter the Index.

Country coverage 2010

In 2010, close to 200 countries were considered for inclusion. Out of the 134 ultimately covered in this *Report*, there were 17 countries that had one data point missing: Angola (Professional and technical workers); Belize (Wage equality for similar work [survey]); Benin (Professional and

Figure 1: Global patterns 2010

Source: Global Gender Gap Index 2010; scores are weighted by population.

technical workers); Brunei (Women in parliament); Chad (Professional and technical workers); Cuba (Wage equality for similar work [survey]); Ghana (Professional and technical workers); Guyana (Enrolment in secondary education); Honduras (Enrolment in secondary education); India (Professional and technical workers); Singapore (Enrolment in tertiary education); Sri Lanka (Enrolment in tertiary education); Suriname (Wage equality for similar work [survey]); Syria (Enrolment in tertiary education); Tunisia (Professional and technical workers); Yemen (Wage equality for similar work [survey]); and Zimbabwe (Estimated earned income [PPP US\$]).

Another 8 countries had two variables missing: Albania (Legislators, senior officials and managers; Professional and technical workers); Bahamas (Wage equality for similar work [survey]); Enrolment in tertiary education); Côte d'Ivoire (Legislators, senior officials, and managers; Professional and technical workers); Fiji (Wage equality for similar work (survey); Women in parliament); Gambia (Legislators, senior officials, and managers; Professional and technical workers); Guatemala (Legislators, senior officials, and managers; Professional and technical workers); Senegal (Legislators, senior officials, and managers; Professional and technical workers); and Tajikistan (Legislators, senior officials, and managers; Professional and technical workers).

Because of the lack of recent data, we have not included Uzbekistan or Belarus this year, countries that had been part of the rankings since the first and second editions of the *Report*, respectively. We have, however, been

able to include two new countries—Côte d'Ivoire and Lebanon—thus maintaining a total of 134 countries covered in the 2010 edition of the *Report*. Of these, 114 have been included in the *Report* since the first edition and another 12 since the second edition. For these 126 countries, detailed two-page Country Profiles reveal the trends presented by the indicators of the Index over the last four to five years.

Global patterns

The detailed rankings from this year's Index are shown in Tables 3 through 5.

Table 3a displays the 2010 rankings and provides comparisons with rankings in 2009, 2008, 2007 and 2006. Table 3b displays the complete 2010 rankings, including four subindex scores and ranks. Table 3c provides the year-to-year score changes over the last five years. Out of the 114 countries that have been covered in 2006, 2007, 2008, 2009 and 2010, 98 (86%) have improved their performance over the last four years, while 16 (14%) have shown widening gaps.

Figure 1 shows a global snapshot of the gender gap on the four subindexes. It shows that the 134 countries covered in the *Report*, representing over 90% of the world's population, have closed almost 96% of the gap on health outcomes between women and men and almost 93% of the gap on educational attainment. However, the gap between women and men on economic participation and political empowerment remains wide: only 59% of the

Table 3a: The Global Gender Gap Index 2010 rankings: Comparisons with 2009, 2008, 2007 and 2006

Figure 2: Regional performance on the Global Gender Gap Index 2010

Source: Global Gender Gap Index 2010; details of regional classifications in Appendix B.

economic outcomes gap and only 18% of the political outcomes gap has been closed.

Table 4 shows the rankings of countries by income group and Table 5 shows the rankings of countries by subindex. Table B2 in Appendix B displays the income group categories used. In 2010, in the high-income group, the Nordic countries lead the way; in the upper-middle-income group, South Africa and Cuba rank highest; in the lower-middle-income group, Lesotho and the Philippines come out on top; and in the lower-income group, Mozambique and Uganda are the strongest performers. In 2010, 22 countries have fully closed the gap on educational attainment, compared with 25 countries in 2009, 24 in 2008 and 15 in 2007. Thirty-seven countries have closed the gap on health and survival, compared with 37 in 2009, 36 in 2008 and 32 in 2007. Among these, 8 countries have closed the gap on both subindexes.

Regional trends

Table 6 displays the rankings within each regional category. In Europe, the Nordic countries again come out on top; in North America, the United States now leads the way. In Latin America and the Caribbean, Trinidad and Tobago, Cuba, Costa Rica and Argentina are among the best performers. In the Middle East and North Africa, Israel holds the top position; in the Arab World, the United Arab Emirates leads the way, followed by Kuwait, Tunisia and Bahrain. In Asia and the Pacific, New Zealand, the Philippines, Sri Lanka and Australia are ranked highest. In

sub-Saharan Africa, Lesotho, South Africa and Namibia hold the highest positions. Figure 2 displays the regional performance on the overall Index score, while Figures 3 through 6 display regional performance on each of the four subindexes.⁹ All scores were weighted by population to produce the regional averages. Table B1 in Appendix B displays the regional categories used.¹⁰ In the overall Index scores, North America holds the top spot, followed closely by Europe and Central Asia. Both regions have closed over 70% of the gender gap. They are followed by Latin America and the Caribbean, Asia and the Pacific and sub-Saharan Africa; these regions have closed between 60% and 70% of the gender gap. Finally, the Middle East and North Africa region occupies the last place, having closed a little over 58% of its gender gap.

Top 10

The four Nordic countries that have consistently held the highest positions in previous editions of the Global Gender Gap Index continue to hold these privileged positions, but the top rankings have been reallocated again this year. **Iceland** (1) still holds the top spot while **Norway** (2) takes back 2nd place from **Finland** (3). Iceland shows further gains in the area of political empowerment because of an increase in the number of women ministers, a near gender-balanced parliament and the continued tenure of a female prime minister. Iceland continues to hold 1st position on both educational attainment and political empowerment, and women's labour force participation in Iceland is

among the highest in the world. However, there is still a significant difference between men's and women's salaries in Iceland. The extensive preschool and day-care system provided by most municipalities, a legal right for parents to return to their jobs after childbirth and a generous parental leave system are major contributors to Iceland's ranking. In March 2010 the Icelandic parliament adopted a legislative reform to promote gender equality on the boards of publicly owned companies and public limited companies having at least 50 employees; these companies must have at least 40% of both genders represented on their boards by September 2013. Moreover, companies with 25 or more employees are required to disclose the number of men and women employed as well as the number of men and women in management positions.

Norway moves to the 2nd spot due to small improvements on labour force participation of women (from 75% to 76%), on the perception of wage equality and on the estimated earned income. Finland improves relative to its own score in 2009 but Norway's greater relative advance puts it further ahead in this year's rankings.

Sweden (4) completes the Nordic countries' sustained dominance of the top four. With an impressive score, Sweden held the number one spot in 2006 and 2007, but since its gap has remained either unchanged or widened slightly over the last three years, it has fallen behind. The remaining Nordic country—**Denmark** (7)—continues to hold a place among the top 10 and its score remains unchanged, rounding off the Nordic countries' record as top performers. While no country has yet achieved gender

equality, all of the Nordic countries, with the exception of Denmark, have closed over 80% of the gender gap and thus serve as models and useful benchmarks for international comparisons. While many global indexes tend to be tied to income levels, thus providing an advantage to the rich Nordic economies, the Global Gender Gap Index is disassociated from the income and resource level of an economy and instead seeks to measure how equitably the available income, resources and opportunities are distributed between women and men. Despite this feature of the Index, these countries emerge as top performers and true leaders on gender equality.

All Nordic countries reached 99–100% literacy for both sexes several decades ago and display gender parity at both primary- and secondary-level education. At the tertiary level, in addition to very high levels of enrolment for both women and men, the gender gap has been reversed and women now make up the majority of the high-skilled workforce. In Norway, Sweden and Iceland there are over 1.5 women for every man enrolled in tertiary education, and in Finland and Denmark women also make up the majority of those in tertiary education. The Nordic countries also exhibit very high healthy life expectancies for both women and men, with women living on average three to four healthy years longer than men.

While many developed economies have succeeded in closing the gender gap in education, few have succeeded in maximizing the returns from this investment. The Nordic countries are leaders in this area—all five countries

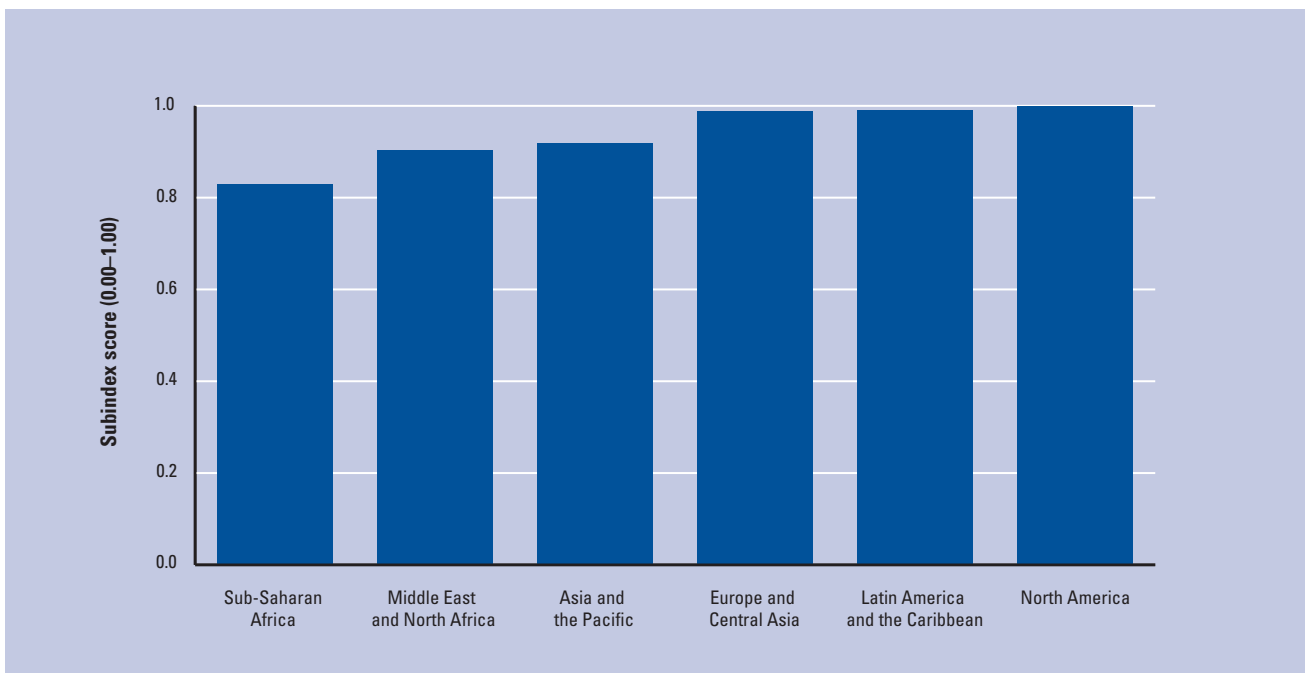

feature in the top 30 of the economic participation and opportunity subindex. This occurs because of a combination of factors: the labour force participation rates for women are among the highest in the world; salary gaps between women and men are among the lowest in the world, although not non-existent; and women have abundant opportunities to rise to positions of leadership. These patterns vary across the Nordic countries, but on the whole these economies have made it possible for parents to combine work and family, resulting in high female participation rates, more shared participation in childcare, more equitable distribution of labour at home, better work-life balance for both women and men and in some cases a boost to declining fertility rates. Policies applied in these countries include mandatory paternal leave in combination with maternity leave, generous federally mandated parental leave benefits provided by a combination of social insurance funds and employers, tax incentives and post-maternity re-entry programmes. Together these policies have also led to relatively higher and rising birth rates occurring simultaneously with high female workforce participation in the Nordic countries, as compared with the situation in other OECD economies such as Germany, Japan, Italy and Spain where both birth rates and participation are lower. The Nordic experience points to fewer problems with ageing in the future, as well as higher labour activity and a more robust economy. Finally there has also been success with a top-down approach to promoting women's leadership—in Norway, publicly listed

companies are required to have 40% of each sex on their boards since 2008 and other countries are adopting similar measures.

The Nordic countries were early starters in providing women with the right to vote (Sweden in 1919, Norway in 1913, Iceland and Denmark in 1915, Finland in 1906). In Denmark, Sweden and Norway, political parties introduced voluntary gender quotas in the 1970s, resulting in high levels of female political representatives over the years. In Denmark, in fact, this quota has since been abandoned as no further stimulus is required. Today, Sweden has among the highest percentage of women in parliament in the world (47%) while the other Nordic countries are also successful in this respect. These countries have a similarly strong record on the percentage of women in ministerial level positions (Iceland 45%, Norway 53%, Finland 63%, Sweden 45% and Denmark 42%).

New Zealand (5) retains its privileged position in the rankings while showing an absolute decrease in scores for economic participation, political empowerment and health. **Ireland** (6) improves its performance relative to its own score in previous years and also gains two spots in the rankings. **Lesotho** (8), which gains two places, is once again the only country in sub-Saharan Africa to have no gap in both education and health. Lesotho holds the 1st place on the literacy rate and secondary enrolment indicators. It is also the highest-ranking country among the 134 countries on the economic participation subindex. The female estimated earned income increases this year, whereas men's estimated earned income decreases compared to last year's data. **The Philippines** (9) remains the highest-ranking country from Asia in the Index. It ranks 1st on both education and health and is also a very strong performer on economic participation (13) and political empowerment (17). The Philippines is the only country in Asia this year to have closed the gender gap on both education and health, and is among only eight countries in the world to have done so.

Switzerland (10) moves up three places to enter the top 10 ranking for the first time in the five years that the Index has been in existence. Over the past five years, it has made fairly steady progression up the ranks, from 40th to 10th place, mainly because of a greater representation of women in parliament and in the government. While it is not covered in this year's *Report* (our data are from July), as of the elections held in September 2010, Switzerland has a majority female cabinet, brushing aside Switzerland's history as one of Europe's last nations to grant women full suffrage. The result puts Switzerland alongside Finland, Norway, Spain and Cape Verde as countries identified by the Inter-Parliamentary Union as having a majority of women in government. However, there is still some progress to be made regarding the equity between women and men in professional life: wage disparities remain a significant cause for concern, maternity leave policies in Switzerland are among the least generous in Europe,

women are rarely found on Swiss corporate boards and they hold far fewer senior management positions than men.¹¹

Europe and Central Asia

Seven European countries are among the 10 highest-ranked countries in the world, as noted in the section above, and 13 are among the top 20. Following the Nordic countries, Ireland and Switzerland, these include **Spain** (11), **Germany** (13), **Belgium** (14), the **United Kingdom** (15), the **Netherlands** (17) and **Latvia** (18).

Spain moves up six places in the overall report rankings, improving its scores across all subindexes to regain the same overall position it held in 2006. It records some small gains in the category of women's economic participation and opportunity (increases in female labour force participation, wage equality and estimated earned income, as well as in the numbers of female professional and technical workers). Spain's strengths include the number of women in ministerial positions, an area where Spain is among the countries with the highest percentage out of the 134 countries covered. However, Spain still ranks towards the very bottom on wage equality, assuming 117th position. Improvements to Spain's performance in terms of women's economic participation may be expected in the future following the recent introduction of a law that obligates all companies with more than 250 employees to create gender equality plans and the largest companies to have 40-percent female boards of directors by 2015. The new law also grants 15 days' paternity leave to new fathers. In addition, women must take up at least 40 percent of the lists of candidates that parties field in elections, under the new law.

Germany follows next at 13th place. There are improvements in labour force participation of women (69% to 71%), perceptions of wage equality, estimated earned income and the percentage of women in parliament. Despite these gains, Germany falls in the rankings for the fifth consecutive year, as other countries have improved by a larger margin.

Belgium moves up to 14th position because of improvements across all four subindexes. Within the subindex on economic participation and opportunity, there are slight increases in women's labour force participation and in wage equality, accompanied by a larger increase in women's estimated earned income. There is also an improvement in women's political empowerment—this advance is caused primarily by a change in government, which led to a 10% increase in the number of female ministers. During the period covered by the *Report*, there has also been a 4% increase in the number of female parliamentarians. The United Kingdom is next, holding firmly onto its position of 15th place. The United Kingdom is followed by the Netherlands, which slips down six places to 17th position and by Latvia, which loses four places to occupy the 18th spot.

Next in the region's rankings is **Luxembourg** (26), gaining several places because of an improvement in the category of estimated earned income, where both women and men have crossed the US\$ 40,000 benchmark. While there is a slight decrease (5%) among the numbers of female members of parliament, there is a small increase in the proportion of women ministers. **Portugal** (32) reverses its downward trend of the past few years to move up to 32nd place from 46th last year, primarily due to gains in labour force participation and women in ministerial level positions. Next in the rankings for the region are **Moldova** (34), **Lithuania** (35), **Austria** (37) and **Kazakhstan** (41).

Slovenia follows in 42nd position, gaining 10 places relative to last year's rankings. This boost is mostly the result of improved performance in the health and survival category (an increase in female life expectancy), as well as in the political empowerment subindex (an increase in the number of female ministers). There is also a small increase in the ratio of female-to-male ministers in parliament, although women are still severely under-represented in this area. **Poland** comes next at 43 (up seven places from last year), closely followed by the **Russian Federation** (45), which moves up six places in the overall Index. While the Russian Federation slips from 24th to 28th place in terms of economic participation, it remains a strong performer in this area. Over the last five years there have also been improvements in the proportion of women in parliament and in ministerial level positions.

France slips down to 46th place on the Index (a loss of 28 places since last year, approaching close to its 2007 level). This drop is mainly because of its poor performance across the subindex of women's political empowerment, with France slipping from 16th place to 47th on this variable. The evidence reveals that gender disparities in French politics remain persistent, despite legislation that mandates an equal number of men and women candidates on political party lists. During 2008–09, following President Sarkozy's entry into government, there was a highly publicized rise in the number of women holding ministerial positions. However, during the period covered by this year's *Report*, two of these female ministers have departed the cabinet while the overall size of the cabinet has grown, leading to a considerable change in proportion. There is, however, a very slight increase in the numbers of women in the parliament since last year, and small gains in female representation are seen in the categories of legislators, senior officials, and managers (France ranks 20th overall in this category), as well as among professional and technical workers. However, women are still under-represented at management level and these discrepancies in the workplace have fomented a debate about whether to enforce gender quotas. Over the last three years, there has also been an increasing perception that French women do not earn the same salary as men for similar work. At 127th

position, France now ranks near the very bottom on this indicator.

Estonia falls 10 places, to 47th place overall. Its rankings are significantly lower this year on the health and survival subindex as well as the political empowerment subindex. However, there is an increase in the number of female legislators, senior officials and managers, and wage equality also advances by a small amount, although Estonia still has one of the widest gender pay gaps in the European Union (EU) area and ranks 87th on this indicator.

Macedonia, FYR (49) follows next, gaining four places. At 50th place, **Bulgaria** ranks as the lowest upper-middle-income country and drops 12 places relative to last year. **Kyrgyz Republic** (51) and **Croatia** (53) follow in the rankings. **Greece** (58) moves up 27 places from 85th place last year. The number of female legislators, senior officials and managers increases slightly, but the most marked improvements are in the numbers of female professional and technical workers—with Greece almost achieving gender parity—and in the area of political empowerment, with an increase in the number of women holding ministerial positions and an accompanying increase in the number of female parliamentarians.

Ukraine (63), **Czech Republic** (65), **Romania** (67), **Slovakia** (71), **Italy** (74) and **Albania** (78) follow next. Italy continues to be one of the lowest-ranking countries in the EU and deteriorates further over the last year. **Hungary** (79) slips 14 places this year. The most noticeable drop for Hungary is in the area of political empowerment, with the proportion of women ministers falling from 21% to 0%. At 83rd place, **Malta** is among the lowest-ranked EU countries in the overall rankings. **Armenia** comes next and gains six places to take the 84th spot in the rankings. It is closely followed by **Cyprus** (86), **Georgia** (88) and **Tajikistan** (89), all of which fall in this year's rankings.

Azerbaijan falls 11 places to take the 100th position in the Index. While there is a small increase in the female-to-male ratio for labour force participation, perceived wage equality decreases and estimated earned income also falls. Finally, **Turkey** rounds up the rankings for Europe and Central Asia, moving up three places from last year to assume the 126th position. With a labour force participation rate of 26%, with women's wages only about a quarter of men's wages and with only 10% women in legislative, senior official and managerial positions, Turkey will need to consider better integration of its female human capital, particularly as women begin to make up almost 80% of university-level students.

North America

The **United States** (19) makes a leap in the rankings this year, up from the 31st place in 2009 to enter the top 20 for the first time. The United States has a demonstrated strength in educational attainment, with very high levels of literacy for both women and men and very high levels of women's enrolment in primary, secondary and tertiary

education, with women outstripping men in tertiary-level education. The United States places 6th in the world in terms of economic participation and opportunity. Women's labour force participation stands at 68% while men's is 80%. While new data show an increase in the female estimated earned income—up from US\$ 25,613 to US\$ 34,996 (PPP)—leading to some of the increase in the US ranking, the perceived wage inequality for similar work remains high, placing the United States at 64th in the world on this variable. Another core strength of the United States is the prominent numbers of women in legislative, senior official and managerial positions as well professional and technical worker positions. While political empowerment has not been a key strength of the United States in previous years, there have been some gains in the percentage of women in ministerial level positions in the current administration, up from 24% to 33%.

Canada (20) gains five places in the rankings and shows improvement on all four subindexes. Like the United States, Canada's strength lies in educational attainment and economic participation. Women's labour force participation rate is 75% while men's is 83%. The estimated earned income gap places Canada at 33rd in the world for this indicator; the perception of the wage gap for similar work places Canada at 18th in the world for this variable. Thirty-six percent of legislators, senior officials and managers and 57% of professional and technical workers positions are occupied by women.

Latin America and the Caribbean

Thirteen countries in the Latin America and Caribbean region have fully closed their gender gaps in the health and survival subindex, and five countries have fully closed gaps in educational attainment. The remaining gaps are thus most concentrated in the economic participation and political empowerment subindexes.

Once again, **Trinidad and Tobago** (21) holds the highest spot in the region, supported in particular by high proportions of women among legislators, senior officials and managers (43%) as well as in professional and technical worker positions (53%), and almost 30% women in parliament and 34% women in ministerial positions. **Cuba** (24) holds the 2nd spot in the region, supported by very high levels of enrolment in primary, secondary and tertiary education for both women and men, and 43% women in parliament and almost 60% of professional and technical worker positions are occupied by women.

Costa Rica (28) and **Argentina** (29) follow next. Argentina slips five spots in the rankings compared with last year, driven by small losses in economic participation and political empowerment. Argentina's strong points are health, near parity on education and a good performance on political empowerment. However, economic participation, particularly labour force participation, wage gaps and participation of women in senior positions remain weaknesses.

Nicaragua (30), **Barbados** (31), **Bahamas** (36), **Guyana** (38), **Panama** (39), **Ecuador** (40) and **Jamaica** (44) follow next in the rankings. **Chile** (48) is the second-highest ranked of the region's big economies, after Argentina, gaining 16 places in the rankings since last year. Chile's strengths lie in the area of political empowerment, driven particularly by the tenure of ex-President Michelle Bachelet and a high proportion of women ministers, as well as in educational attainment with near balanced education for both sexes. Chile also holds the top spot on health and survival. Chile's main drawback is the continued low levels of women's labour force participation (47% for women as compared with 78% for men), low levels of estimated earned income for women in comparison with men and very low perceived wage equality.

Honduras (54), **Colombia** (55), **Uruguay** (59) and **Peru** (60) occupy the next four spots in the rankings. **Venezuela** (64) gains five places in the rankings relative to 2009, followed by **Paraguay** (69), **Dominican Republic** (73) and **Bolivia** (76). While there is a slightly higher number of women in ministerial positions in Venezuela, this is mainly offset by the losses in women's labour force participation. Venezuela's main strengths lie in the areas of educational attainment and health.

Brazil (85) falls further in the rankings this year, from 81st to 85th place, driven by small losses in education and political empowerment as well as gains by other countries in the relative rankings. Enrolment in primary education for girls, while high, remains below that of boys (93% for girls compared with 95% for boys). Women's labour force participation, at 64%, is still well below that of men (85%). Women's estimated earned income is a little under two thirds that of men (US\$ 7,190 for women as compared with US\$ 12,006 for men). The perception of wage equality for similar work is among the worst in the world (123rd place) and has been decreasing steadily for the last three years. Finally, with women holding only 9% of parliamentary positions and only 7% of ministerial level positions, Brazil ranks very low on these indicators (108th and 102nd, respectively). However, as this *Report* goes to print, Brazil may be on the verge of electing its first female president.

El Salvador (90), **Mexico** (91), **Belize** (93) and **Suriname** (102) occupy some of the last positions in the region. Mexico gains seven places relative to last year, primarily because of the combined effect of small gains in women's labour force participation (44% to 46%), estimated earned income (US\$ 7,311 to US\$ 8,375) and enrolment in tertiary education (26% to 27%). However, with the labour force participation rate of women still nearly only half that of men and a high wage gap, Mexico remains towards the bottom of the rankings.

Guatemala (109), the lowest-ranking country in the Latin America and Caribbean region, remains disadvantaged in the rankings because of a high gap on education,

low political empowerment and low labour force participation.

Middle East and North Africa

Israel (52) continues to hold the top spot in the Middle East and North African region, buoyed by a higher-than-average performance on the economic participation and opportunity subindex. However, Israel loses seven places relative to its position last year. There are small losses on all four subindexes, driven particularly by a widening wage gap and a smaller proportion of women in ministerial level positions.

The **United Arab Emirates** (103) gains nine places to attain 1st position among the Arab countries. The labour force participation rate of women has increased from 41% to 43% and the wage gap narrows relative to the US\$ 40,000 maximum value for men. New data show that literacy rates for women are now higher than those of men, there are small gains in primary, secondary and tertiary enrolment data, and the proportion of women holding ministerial level positions has increased. **Kuwait** (105), **Tunisia** (107), **Bahrain** (110) and **Mauritania** (113) follow next in the rankings, favoured by higher-than-average performances on educational attainment. Compared with last year, Kuwait's ranking does not change, Tunisia gains two spots and Bahrain gains six places. Bahrain's improvements are mainly driven by significant improvements in the proportion of women legislators, senior officials and managers and the proportion of women holding ministerial level positions. The highest-ranking economies of the region have invested large amounts of resources in increasing women's education levels—in many, the tertiary education enrolment rates of women are higher than those of men—and these countries will now need to better integrate these women into the economy to reap the benefits of this investment.

Lebanon (116), **Qatar** (117), **Algeria** (119) and **Jordan** (120) follow next in the rankings. Lebanon enters the Index for the first time this year. While Lebanon performs well on health, it lags behind on the other subindexes, in particular economic participation. Qatar's strength lies in education, although gains in labour force participation and wage equality have boosted Qatar's overall ranking by eight places. Algeria loses two positions relative to last year while Jordan falls seven places. While there have been notable gains in labour force participation of women in Jordan, new data show new estimates of earned income that place Jordan lower than previously reported. Jordan's key strength continues to lie in the area of education where primary, secondary and tertiary enrolment rates of girls are higher than those of boys

Oman (122), **Syria** (124), **Egypt** (125), **Morocco** (127), **Saudi Arabia** (129) and **Yemen** (134) occupy the bottom half of the region's rankings. Egypt gains one spot relative to last year but continues to be one of the lowest-performing countries from the region on educa-

tional attainment. Saudi Arabia's performance over the last five years puts it among the highest climbers of the 114 countries that have been included in the *Report* since 2006. Between 2009 and 2010, the labour force participation rate of women has climbed from 20% to 22%, the perception of the wage gap for similar work has improved, literacy rates have improved and women's enrolment in tertiary education has increased from 35% to 37%. Saudi Arabia remains the lowest-ranking country in the region on political empowerment, with the lowest possible score of zero.

Finally, Yemen continues to occupy the last place in the region as well as in the overall rankings of 134 countries. It remains the only country in the world to have closed less than 50% of its gender gap, and it deteriorates further this year relative to its own performance in 2008.

Asia and the Pacific

New Zealand (5) and the Philippines (9) lead the way in the region and are the only two countries from the region to hold places in the top 10 of the global rankings. **Sri Lanka** (16) is distinctive for being the only South Asian country in the top 20 for the fourth consecutive year. Sri Lanka's performance remains steady as it maintains the same rank as 2009. In addition to higher-than-average performance in education and health, Sri Lanka continues to hold a privileged position regarding political empowerment. **Australia** (23) follows next, driven by high levels of education, economic participation and political empowerment.¹²

The next places in the region are occupied by **Mongolia** (27), **Singapore** (56) and **Thailand** (57). **China** (61) loses one place relative to last year from the combined effect of lower scores on labour force participation, perceived wage equality and the sex ratio at birth—down this year from 0.91 girls for every boy to 0.88 girls for every boy. China becomes the second-last ranking country on the health and survival subindex (133), the result of its disproportionate sex ratio at birth, which contributes to China's "missing women" phenomenon.¹³ China is followed by **Vietnam** (72) in the region's rankings.

Brunei Darussalam (77), **Bangladesh** (82) and **Indonesia** (87) take the next spots in the rankings. Bangladesh is a leader in the region on political empowerment, but it still has much progress to make on women's economic participation (particularly in high-skilled or senior positions), on wage gaps, in women's life expectancy and in women's tertiary enrolment rates. Indonesia's situation is similar to that of Bangladesh, with higher-than-average levels of political empowerment but low scores on aspects of economic participation, educational attainment and health.

Japan (94), **Cambodia** (97), **Malaysia** (98), **Maldives** (99), **Korea** (104) and **Fiji** (108) follow next in the rankings. Japan and Korea continue to be among the lowest-ranking OECD countries. Japan shows progress this year by gaining

seven places overall, driven by small increases on all four aspects of the Index, in particular a rise in the estimated earned income of women and the percentage of women in parliament. Women make up about 54% of those receiving tertiary education but only about 9% of those occupying senior leadership positions, indicating an inefficient use of the female talent available in the country. Korea also shows a strong upward movement in the rankings (rising from 115 in 2009 to 104 in 2010 overall), driven primarily by gains in the female primary and tertiary enrolment rates and increases in the proportion of women in parliament and in ministerial level positions.

India (112), **Nepal** (115), the **Islamic Republic of Iran** (123) and **Pakistan** (132) occupy the last places in the regional rankings. India and Pakistan perform above average on the political empowerment of women, particularly India, but lag behind in the other three categories. In particular, the persistent health, education and economic participation gaps will be detrimental to India's growth; India is the lowest ranked of the BRIC economies featured in the Index.

Sub-Saharan Africa

The sub-Saharan Africa region performs well on the economic participation and opportunity subindex, ranking ahead of Latin America and the Caribbean, Asia and the Pacific and the Middle East and North Africa. In fact, of the top 10 performers on the labour force participation gender gap indicator, six countries are from the region. However, poor enrolment rates and low levels of life expectancy continue to pose major challenges. Lesotho (8) reassumes the top spot in the region after having lost it last year, and is once again the only country from the region to have no gap in education and health. Lesotho is followed by **South Africa** (12) as the only other African country in the top 20. Although South Africa holds the top spot in the region on political empowerment, the percentage of female ministers fell from 45% to 34% this year. Updated data from the World Health Organization regarding healthy life expectancy shows that the difference between female and male healthy life expectancy continues to narrow. **Mozambique** (22) moves up in the rankings, gaining four places as female enrolment in secondary school increases from 2% to 6% and women's percentage in parliament moves up from 35% to 39%. Mozambique holds the second-best position on the labour force participation indicator overall. **Namibia** (25) moves up seven places from 32nd place last year, followed by **Uganda** (33). **Botswana** (62) loses 23 places in the rankings in 2010, mainly because the latest data reveal a worsening gap in the economic participation and opportunity subindex. However, Botswana, in addition to Lesotho, is one of two countries from the region that has achieved gender parity on education. Botswana is followed in the rankings by **Tanzania** (66) and **Malawi** (68).

Ghana (70) gains 10 places in the rankings this year. This is partly the result of an improvement in the health and survival subindex and partly the result of an increase in the percentage of ministerial level positions held by women (from 16% to 22%). **Gambia** (75) holds the same position this year as last, despite a small improvement in its score relative to its performance last year. **Madagascar** occupies the 80th position on the Index, followed by **Angola** (81). **Zimbabwe** (92) moves up three spots compared with last year's rankings but continues to hold the last position on the healthy life expectancy indicator, with women living two years less than men at an average healthy life expectancy of only 38 years. **Mauritius** (95), **Kenya** (96), **Senegal** (101) and **Zambia** (106) hold the next spots in the region's rankings.

Burkina Faso (111) moves up nine spots, driven by gains in economic, education and political empowerment. **Cameroon** holds the 114th position on the Index. **Nigeria** (118) falls 10 places in the rankings because of a widening gap in all four subindexes. **Ethiopia** holds the 121st position in this year's rankings and the last position on the literacy rate indicator. In **Benin** (128), female labour force participation increases this year from 60% to 69%, boosting its overall score. **Côte d'Ivoire** (130) enters the Index for the first time this year. **Mali** (131) slips down four spots relative to its performance last year; improvements on the health and survival subindex were offset by a weaker performance in the economic participation subindex. Mali is one of the three countries—along with Iran and Saudi Arabia—to have poor or no legislation punishing acts of violence against women, according to the OECD. **Chad** (133) continues to occupy the lowest overall position on the Index in the region and on the educational attainment subindex.

The link with the economic performance of countries

The most important determinant of a country's competitiveness is its human talent—the skills, education and productivity of its workforce. And women account for one-half of the potential talent base throughout the world. While closing gender gaps is a matter of human rights and equity, it is also one of efficiency. Figure 7 shows a plot of the Global Gender Gap Index 2010 scores against the Global Competitiveness Index 2010–2011 scores and Figure 8 plots the Global Gender Gap Index 2010 scores against GDP per capita. We have produced these two graphs in all previous editions of the *Report*; both graphs once again confirm a correlation between gender equality and the level of competitiveness and GDP per capita. This year we have added Figure 9, showing the relationship between the Global Gender Gap Index and the Human Development Index to supplement the graphs linking gender gaps with competitiveness and gender gaps with income with a graph linking gender gaps to a measure of human development.

Figure 7: Relationship between the Global Competitiveness Index 2010–2011 and the Global Gender Gap Index 2010

Source: Global Gender Gap Index 2010 and Global Competitiveness Index 2010–2011.

Figure 8: Relationship between GDP per capita and the Global Gender Gap Index 2010 scores

Source: Global Gender Gap Index 2010 and the World Bank's *World dataBank: World Development Indicators & Global Development Finance*, online database 2008, accessed July 2010.

Notes: Luxembourg is not visible on this graph as it is an outlier on the income dimension. Global Gender Gap Index scale has been truncated to enhance readability.

Figure 9: Relationship between the Human Development Index 2007 and the Global Gender Gap Index 2010

Source: UNDP, *Human Development Report 2009* and Global Gender Gap Index 2010

The correlation is evident despite the fact that, as opposed to other gender indexes, the Global Gender Gap Index explicitly eliminates any direct impact of the absolute levels of any of the variables (e.g., life expectancy, educational attainment, labour force participation) on the Index. While correlation does not prove causality, it is consistent with the theory and mounting evidence that empowering women means a more efficient use of a nation's human talent. This theory is given further weight by the numerous studies during the last decade that have confirmed that reducing gender inequality enhances productivity and economic growth.

There are several interconnected areas that may serve as conduits for the demonstrated link between gender equality and productivity, growth and development.

- *Girls' education:* Research demonstrates that investment in girls' education has significant multiplier effects: it reduces high fertility rates, lowers infant and child mortality rates, lowers maternal mortality rates, increases women's labour force participation rates and earnings and fosters educational investment in children.¹⁴ These outcomes not only improve the quality of life, they also foster faster economic growth and development. A substantial body of literature has shown investing in girls' education to be one of the highest-return investments that a developing economy can make. Out of the world's 130 million out-of-school youth, 70 percent are girls;¹⁵ even where there is parity in enrolment, there are discrepancies between the quality

of boys' and girls' education. Education remains the key for many of the low-ranking countries covered in this *Report*.

- *Women's labour force participation:* According to recent research, a reduction in the male-female employment gap has been an important driver of European economic growth in the last decade.¹⁶ Closing this gap would have huge economic implications for developed economies, boosting US GDP by as much as 9%, euro zone GDP by as much as 13% and Japanese GDP by as much as 16%. Greater economic opportunity for women in these countries could also play a key role in addressing the future problems posed by ageing populations and mounting pension burdens. Moreover, in countries in which it is relatively easy for women to combine work with having children, female employment and female fertility both tend to be higher. A report by the United Nations Economic and Social Commission for Asia and the Pacific Countries found that restricting job opportunities for women is costing the region between US\$ 42 and US\$ 46 billion a year.¹⁷ Research by the World Bank demonstrates that similar restrictions have also imposed massive costs throughout the Middle East, where decades of substantial investment have dramatically reduced the gender gap in education but the gender gap in economic opportunity remains the widest in the world.

- *Women as consumers:* There is new research on the growing “power of the purse” and how this will be among the drivers of growth in the post-crisis economy. The combined impact of growing gender equality, the emerging middle class and women’s spending priorities will lead to rising household savings rates and shifting spending patterns that are likely to benefit sectors such as food, healthcare, education, childcare, apparel, consumer durables and financial services, particularly in emerging markets.¹⁸ The study predicts that over the next five years, these effects will be seen most clearly in China and Russia, and to a lesser extent in Vietnam, Mexico, Brazil and Indonesia. In the subsequent decade (2015–25), these dynamics are likely to remain strong in Mexico and Russia, and to continue to strengthen in China, Indonesia, Vietnam, India and the Philippines. India’s middle class will see rapid growth off a very low base, but the shifts in spending that we outline are likely to remain constrained by women’s relatively low status, at least for the next 10 to 15 years.
- *Women and spending decisions:* Research has shown that women are likely to invest a larger proportion of their household income than men would in the education and health of their children. There is some evidence from India to suggest that women in local government roles also make decisions with better outcomes for communities when charged with budget decisions;¹⁹ they also appear to be more competent representatives than men, obtaining more resources for their constituencies despite having significantly lower education and relevant labor market experience.²⁰
- *Women and leadership:* Innovation requires new, unique ideas—and the best ideas flourish in a diverse environment. This implies that companies benefit by successfully integrating the female half of the available talent pool across their internal leadership structures. This is particularly relevant in many developed countries, where women now account for more than half of the college and university graduates. As they begin to take up half of entry-level positions in several industries, it is a loss for companies if these high-skilled women are forced into a choice between work and family at later stages of their career as evident in the data from several OECD countries.²¹ Studies exploring the link between women in leadership positions and business performance have shown a positive correlation between gender diversity on top leadership teams and a company’s financial results.²² Over the last two years, in the midst of the global economic downturn, several new themes have emerged about gender equality in the workplace and its impact. Biologists, behavioural economists and psychologists have contributed to discussions on some

of the decisions and excesses that led to the financial crisis and have suggested that more diverse teams make better informed decisions, leading to less risk-taking and more successful outcomes for companies.

Over time, therefore, a nation’s competitiveness depends significantly on whether and how it educates and utilizes its female talent. To maximize its competitiveness and development potential, each country should strive for gender equality—that is, to give women the same rights, responsibilities and opportunities as men. It has been shown through our own research as well as that of others that the current economic participation of women, even in countries where they are as healthy and as educated as men, is far from optimal. Business leaders and policy-makers must ensure that barriers to women’s entry to the workforce are removed and put in place practices and policies that will provide equal opportunities for rising to positions of leadership within companies. Such practices will ensure that all existing resources are used in the most efficient manner and that the right signals are sent regarding the future flow of talent.

Tracking the gender gap over time

The Global Gender Gap Index was first published in 2006 with a view to creating a comprehensive gender parity index that is able to track gaps over time relative to an equality benchmark, thus providing information on a country’s progress relative to itself as well as other countries.

Based on the five years of data available for the 114 countries that have been part of the *Report* since its inception, we find that, on the whole, much of the world has made progress on closing gender gaps. Figure A1 in Appendix A displays changes over time within the four subindexes, while Figure A2 displays changes over time on the Index score across different regions. In 2006, 14% of the global political empowerment gap had been closed; in 2010, almost 18% of this gap has been closed. In 2006, 56% of the economic participation gap had been closed; in 2010, more than 59% of this gap has been closed. In 2006, almost 92% of the educational attainment gap had been closed; in 2010, over 93% of this gap has been closed. On health and survival, however, there has been a small deterioration between 2006 and 2010. The Asia and the Pacific, Latin America and North America regional categories have displayed improvement over the last five years on the Index score; the Middle East and North Africa, sub-Saharan Africa and Europe and Central Asia have deteriorated.

Table A2 in Appendix A displays the full list of 114 countries covered between 2006 and 2010 ordered according to the percentage change in their score, relative to their score in 2006. Figure A3 displays these countries in a scatter plot divided into four quadrants: countries that were performing above the median score in 2006 and have

shown progress between 2006 and 2010, countries that were performing above the median score in 2006 and have regressed between 2006 and 2010, those that were performing below the median score in 2006 and have shown progress between 2006 and 2010 and those that were performing below the median score in 2006 and have regressed between 2006 and 2010.

Finally, newly expanded Country Profiles allow readers to explore trends over the last five years on the overall Index score, subindex scores and 12 critical individual variables that are used in the Index. It is important to note that there are gaps in international databases and not all countries have information available for all variables across all five years, nor are all data updated on an annual basis for each country by the international organizations that serve as our primary source of data.

We were able to calculate the Global Gender Gap Index backwards to the year 2000 for a limited set of countries in order to take a longer-term look at trends. Table A1 in Appendix A displays the Global Gender Gap Index 2000–2010 for 39 countries where the relevant data were available. In all countries there was a net improvement in scores across the 10 years, with the exception of the Slovak Republic. Switzerland, Belgium, Spain, Finland and Ireland show the largest absolute increases in score, amounting to relative changes of more than 14% when compared to their performance in the year 2000.

Conclusion

The Global Gender Gap Report 2010 continues to provide a snapshot of current performance as in previous reports and introduces valuable new insights regarding progress over the last five years. On average, over 96% of the gap on health outcomes, 93% of the gap on educational attainment, 59% of the gap on economic participation and 18% of the gap on political empowerment have been closed. No country in the world has achieved gender equality. The four highest-ranking countries—Iceland, Norway, Finland, Sweden—have closed a little over 80% of their gender gaps, while the lowest ranking country—Yemen—has closed only around 46% of its gender gap.

The Global Gender Gap Index was developed in 2006 partially to address the need for a consistent and comprehensive measure for gender equality that can track a country's progress over time. The fifth edition of *The Global Gender Gap Report* reveals the trends observed in the data over the past five years and seeks to call attention to the need for more rapid progress in closing gender gaps. Out of the 114 countries covered in 2006–2010, 98 countries (86%) have improved their performance, while 16 of them (14%) have widening gaps. In some countries, progress is occurring in a relatively short time—this is not limited to rich countries or to countries already near the top of the rankings. Countries such as Iceland, Switzerland and France have made much progress relative to their

positions in 2006. So have Singapore, Saudi Arabia, Lesotho, Nepal and Bangladesh, relative to their own situations and, in some cases, relative to other countries. The same is true of those countries that have lost ground over the last five years. While there have been minor losses in high-ranking countries such as Sweden, there have also been significant regressions in countries such as Mali, Benin and Morocco that were already at the lower end of the rankings.

The Index points to potential role models by revealing those countries that—within their region or their income group—are leaders in having divided resources more equitably between women and men as compared with other countries, regardless of the overall level of resources available. In Europe, the Nordic countries are the best performers; in North America, the United States is now the leader. Trinidad and Tobago, Cuba, Costa Rica and Argentina

are the top-ranking countries in Latin America and the Caribbean; Israel ranks the highest in the Middle East and North Africa; and in the Arab World, the United Arab Emirates is followed by Kuwait, Tunisia and Bahrain. In Asia and the Pacific, New Zealand, the Philippines, Sri Lanka and Australia are ranked highest. Lesotho, South Africa and Namibia are the leaders in sub-Saharan Africa. Among income groups, the Nordic countries lead the way in the high-income group; in the upper-middle-income group, the leaders are South Africa and Cuba. Lesotho and the Philippines are the highest-ranking countries of the lower-middle-income group; and Mozambique and Uganda are the strongest performers in the lower-income group. The detailed Country Profiles allow users to understand not only how close each country lies relative to the equality benchmark in each of the four critical areas, but also provide a snapshot of the legal and social framework within which these outcomes are produced. This year, the expanded two-page profile also allows users to see progress on the Index, the subindexes and 12 individual critical indicators over the last five years.

The Index continues to track the strong correlation between a country's gender gap and its national competitiveness. The most important determinant of a country's competitiveness is its human talent—the skills, education and productivity of its workforce—and women account for one-half of the potential talent base throughout the world. Over time, therefore, a nation's competitiveness depends significantly on whether and how it educates and utilizes its female talent.

This *Report* highlights the message to policy-makers that, in order to maximize competitiveness and development potential, each country should strive for gender equality—that is, to give women the same rights, responsibilities and opportunities as men. The Index does not seek to set priorities for countries but rather to provide a comprehensive set of data and a clear method for tracking gaps on critical indicators so that countries may set priorities within their own economic, political and cultural context. We are

hopeful that the information contained in the *Global Gender Gap Report* series will also serve as a basis for further research to develop a clearer understanding of the policies that are successful and those that are not, particularly as increasing numbers of policy-makers, employers and civil society seek out best practices and role models as they incorporate gender equality into their practices and policies.

Notes

- 1 See Greig et al. "The Gender Gap Index 2006".
- 2 This ratio is based on what is considered to be a "normal" sex ratio at birth: 1.06 males for every female born. See Klasen and Wink, "Missing Women: Revisiting the Debate".
- 3 This ratio is based on the standards used in the UN's Gender-Related Development Index, which uses 87.5 years as the maximum age for women and 82.5 years as the maximum age for men.
- 4 A first attempt to calculate the gender gap was made by the World Economic Forum in 2005; see Lopez-Claros and Zahidi, *Women's Empowerment: Measuring the Global Gender Gap*. The 2005 Index, which was attempting to capture women's empowerment, used a "feminist" scale that rewarded women's supremacy over men (highest score is assigned to the country with the biggest gap in favour of women).
- 5 The weights derived for the 2006 Index were used again this year and will be used in future years to allow for comparisons over time.
- 6 This is not strictly accurate in the case of the health variable, where the highest possible value a country can achieve is 0.9796. However, for purposes of simplicity we will refer to this value as 1 throughout the chapter and in all tables, figures and Country Profiles.
- 7 Because of the special equality benchmark value of 0.9796 for the health and survival subindex, it is not strictly accurate that the equality benchmark for the overall index score is 1. This value is in fact $(1 + 1 + 1 + 0.9796) / 4 = 0.9949$. However, for purposes of simplicity, we will refer to the overall equality benchmark as 1 throughout this chapter.
- 8 Since the variables in the subindexes are weighted by the standard deviations, the final scores for the subindexes and the overall Index are not a pure measure of the gap vis-à-vis the equality benchmark and therefore cannot be strictly interpreted as percentage values measuring the closure of the gender gap. However, for ease of interpretation and intuitive appeal, we will be using the percentage concept as a rough interpretation of the final scores.
- 9 A population-weighted average of all scores within each region was taken to produce these charts.
- 10 Please note that we have modified our regional classifications from those used in previous editions of the *Report*.

Appendix A: Tracking the Gender Gap over Time

The five-year dataset for the Global Gender Gap Index indicates progress across regions (Figure A1) and across subindexes (Figure A2). Table A1 shows the biggest gainers

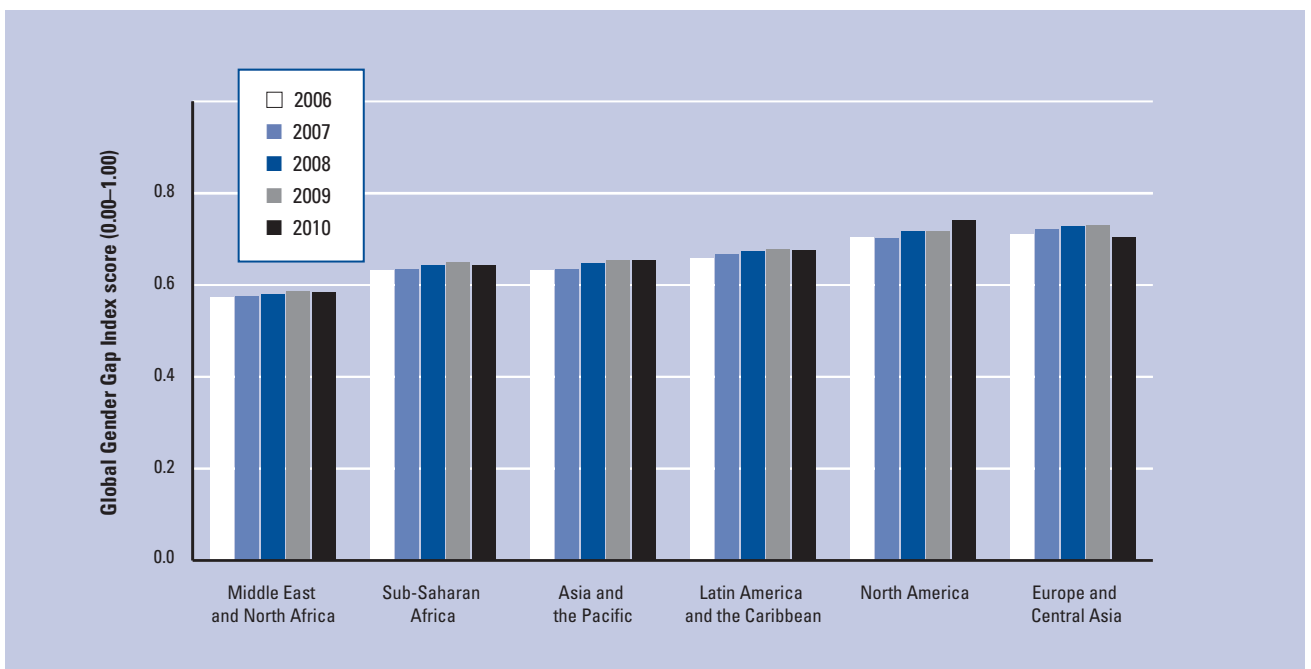

and losers out of the 114 countries covered in the *Report* between 2006 and 2010. The numbers shown are the changes in absolute score values between 2006 and 2010.

Figure A1: Global Gender Gap Index by subindex, 2006–2010

Source: Global Gender Gap Indexes, 2006–2010; scores are weighted by population. Population data are from the World Bank's *World dataBank: World Development Indicators & Global Development Finance*, online database 2008, accessed July 2010.

Figure A2: Global Gender Gap Index by region, 2006–2010

Source: Global Gender Gap Indexes, 2006–2010; details of regional classifications in Appendix B.

Table A1: Change in score (2006–2010) as a percentage of 2006

Country	2006 score	Change in score (2006–2010)	Percent change relative to 2006 score	Country	2006 score	Change in score (2006–2010)	Percent change relative to 2006 score

Note: This table contains only those 114 countries that were covered consistently between 2006 and 2010.

Figure A3 plots the percentage change in score, relative to the actual score in 2006 for the same set of countries. Finally, Table A2 presents the historical calculations made for the Index between 2000 and 2005, along with calculations from the published Index in recent years, for 39

countries for which we were able to find complete data as far back as the year 2000. For a more detailed analysis by subindex and the calculation method, please refer to the Global Gender Gap Index 2007.

Figure A3: Percentage change relative to the Global Gender Gap Index 2006 score

			Saudi Arabia
			Singapore
			Slovakia
			Slovenia
			Spain
			Sweden
			Switzerland
			Trinidad and Tobago
			United Arab Emirates
			United Kingdom
			United States

Note: Income classifications are taken from the World Bank, which classifies economies into four income categories based on GNI per capita: high income, upper middle income, lower middle income and low income.

* New country 2010

Appendix C: Spread of Minimum and Maximum Values by Indicator

The chart below shows the spread of the minimum and maximum values for each of the 14 variables of the Global Gender Gap Index. Each indicator is presented with its own scale of the minimum possible value and maximum possible value. For wage equality for similar work this is a scale of 1 (worst value for women) to 7 (best value for women). For estimated earned income the maximum value is 40,000 US dollars; this is the benchmark used in the calculation of the Index. For sex ratio at birth (female/male) the maximum value is a ratio of 0.944; this is the benchmark used in the calculation of the Index. For healthy life expectancy the maximum value listed is that

of the country with the best performance on this indicator (Japan; 78 years); this is not the benchmark used in the calculation of the Index. For years as head of state the minimum value is 0 years and the maximum value is 50 years. All other variables are expressed as percentages with a minimum value of 0% and a maximum value of 100%.

Male values are represented with black bars while female values are represented with blue bars. In the case of variables with a value that represents a combined measure of the male and female situations (wage equality for similar work and sex ratio at birth) a grey bar is used.

Figure C1: Female and male ranges for Global Gender Gap Index 2010 indicators

User's Guide: How Country Profiles Work

YASMINA BEKHOUCHE

MARC CUÉNOD

World Economic Forum

Country Profiles: Current year

The first page of the Country Profiles presents a compilation of selected data for each individual country included in *The Global Gender Gap Report 2010*.

1 Key Indicators

The first section presents the following indicators:

- The Global Gender Gap Index 2010 gives each country's overall performance in closing the gender gap on a 0-to-1 scale and its rank out of 134 reviewed countries.
- Population (in millions of inhabitants): Source is the World Bank's *World dataBank: World Development Indicators & Global Development Finance*, online database (accessed July 2010).
- Population growth (annual percentage): Source is the World Bank's *World dataBank: World Development Indicators & Global Development Finance*, online database (accessed July 2010).
- GDP (constant 2000 US\$, in billions of US dollars): Source is the World Bank's *World dataBank: World Development Indicators & Global Development Finance*, online database (accessed July 2010).
- GDP per capita in US dollars (constant) adjusted for purchasing power parity: Sources are the World Bank's World Development Indicators Online (accessed July 2010 or latest available).
- Mean age of marriage for women (years): Source is the *United Nations, Department of Economic and Social Affairs, UN Statistics Division* (accessed July 2010).
- Fertility rate (births per woman): Source is the World Health Organization's *Global Health Observatory, Demographic and Socioeconomic Statistics* (accessed July 2010).
- Year women received the right to vote: Source is the United Nations Development Programme (UNDP)'s *Human Development Report 2009*. Data refer to the year in which the right to vote or stand for election on a universal and equal basis was recognized. Where two years are shown, the first figure refers to the first partial recognition of the right to vote or stand for election (accessed July 2010).

- Overall population sex ratio (male/female): Source is the *United Nations, Department of Economic and Social Affairs, UN Statistics Division* (accessed July 2010).
- The spider chart in the upper right-hand side compares the country's score for each of the four subindexes of *The Global Gender Gap Report 2010* with the average score across all 134 countries. The centre of the chart corresponds to the lowest possible score (0), while the outermost corners of the chart correspond to the highest possible score (1), or equality. Please note that the equality benchmark is 1 for all variables except sex ratio at birth (0.944) and healthy life expectancy (1.06). Therefore, the equality benchmark of 1 for the health and survival subindex is not strictly accurate.

2 Gender Gap Subindexes

This section gives an overview of each country's rankings and the scores on the four subindexes of the Global Gender Gap Index 2010.

- For each of the variables that enter into the Global Gender Gap Index 2010, column one in this section displays country rankings, column two displays the country scores, column three displays the population-weighted sample average (134 countries), column four displays the female value, column five displays the male value and, finally, column six displays the female-to-male ratio. To calculate the Index, all ratios were truncated at the equality benchmark of 1 (for more details, please refer to the chapter) and thus the highest score possible is 1 for all variables except for the sex ratio at birth (0.944) and the healthy life expectancy (1.06). In the case of countries where women surpass men on particular variables, the reader can refer to the exact female and male values as well as the female-to-male ratio to understand the magnitude of the female advantage.
- The bar charts visually display the female-to-male ratio for each of the 14 variables, allowing the reader to see clearly when the female-to-male ratio is above or below the equality benchmark. Values above 1 (the equality benchmark) favour women and values below 1 favour men. Please note that the equality benchmark is 1 for all variables, except sex ratio at birth (0.944) and healthy life expectancy (1.06). Therefore, the equality benchmark of 1 in the bar charts for these two variables is not strictly accurate. Finally, in the few cases where the ratio exceeds the scale of the bar chart (which ends at 1.5), the reader should refer to the number under the "female-to-male ratio" column for the actual value.
- The female and male percentages are displayed without decimals for visual clarity.

Economic Participation and Opportunity

- The age group for the labour force participation rate indicator is 15 to 64 years.
- The source of the wage equality for similar work value is the World Economic Forum's *Executive Opinion Survey 2010*. It has been carried out between January and May 2010.
- The source of the estimated earned income value is the UNDP's *Human Development Report 2009*. According to the UNDP, because of a lack of gender-disaggregated income data, female and male earned income figures are crudely estimated on the basis of data on the ratio of the female non-agricultural wage to the male non-agricultural wage, the female and male shares of economically active population, the total female and male population and the GDP per capita in purchasing power parity (PPP) US dollars. The wage ratios used in this calculation are based on data for the most recent year available between 1999 and 2007. Before 2008, the PPP was derived from the 1993 International Comparison Program Surveys. In 2008 the World Bank released the results of the 2005 survey.
- For the purposes of calculating their index, the UNDP scales the female and male values downward to reflect the maximum values of adult literacy (99%), gross enrolment ratios (100%) and GDP per capita (40,000) (PPP US\$).
- For the legislators, senior officials and managers and the professional and technical workers variables, we have previously reported Major Group 1 (Totally and Economically Active Population) and Major Sub-Group 1D (Economically Active Population, by occupation and status in employment) from the International Labour Organization (ILO)'s International Standard Classification of Occupations (ISCO-88). We continue to use Major Group 2 (Employment) and Major Sub-Group 2C (Total Employment, by Occupation) in order to remain consistent with the data obtained from the UNDP.
- Estimates for countries that have implemented the ISCO-88 are not strictly comparable with those for countries using the previous classification (ISCO-68).

Educational Attainment

- For estimation purposes, a value of 99% literacy rate is used for developed countries. The reason for this is that these countries no longer use the traditional measure of literacy, on which the UNESCO Institute of Statistics literacy data are based, which is derived from the individual or household response to the question "Can you read and write" on a national census or household survey. Many countries are now undertaking

literacy assessments in order to measure functional levels of literacy.

Health and Survival

- Updated data (2007 instead of 2003) have become available and have been used for the healthy life expectancy indicator. This has accounted for significant changes in certain countries.

Political Empowerment

- The Inter-Parliamentary Union has updated the *Women in Politics* data upon which the female and male percentages of ministers are based. This has accounted for significant changes in certain countries' scores and rankings.
- The abbreviation "female head of state" is used to describe an elected female head of state or government.

3 Additional Data

This section compiles a selection of internationally available data that may be relevant for the country's gender gap. These data were not used for the purposes of calculating of the Global Gender Gap Index 2010. The indicators in this section are displayed in four broad categories: maternity and childbearing, education and training, employment and earnings and, finally, basic rights and social institutions.

Maternity and Childbearing

- Births attended by skilled health staff (%): Source is the World Health Organization, *Global Health Observatory, Health-related Millennium Development Goals, Maternal health* (accessed July 2010).
- Contraceptive prevalence, married women (%): Source is the United Nations, Department of Economic and Social Affairs, *Statistics Division, Statistics and Indicators on Women and Men* (accessed July 2010).
- Infant mortality rate (per 1,000 live births): Source is the World Health Organization, *Global Health Observatory, Health-related Millennium Development Goals, Child mortality* (accessed July 2010).
- Length of maternity leave (% of wages paid) and provider of maternity coverage: Source is the United Nations, Department of Economic and Social Affairs, *Statistics Division, Statistics and Indicators on Women and Men* (accessed July 2010). The data presented refer to laws and regulations in force at the time of the compilation of information (between 2004 and 2009). Last updated in June 2010.
- Maternal mortality ratio (per 100,000 live births): Source is the World Health Organization, *Global Health*

Observatory, Health-related Millennium Development Goals, Maternal health (accessed July 2010).

- Adolescent fertility rate (births per 1,000 women aged 15–19): Source is the World Health Organization, *Global Health Observatory, Health-related Millennium Development Goals, Maternal health* (accessed July 2010).

Education and Training

- Female teachers in primary education (%), female teachers in secondary education (%) and female teachers in tertiary education (%): Source is UNESCO, *Institute of Statistics Education Statistics*, online database, 2009 or latest available data.

Employment and Earnings

- Female and male adult unemployment rates (%): Source is the World Bank's *World dataBank: World Development Indicators*, online database, 2008 or latest available data.
- Women in non-agricultural paid labour (% of total labour force): Source is the United Nations *Millennium Goals Indicators*, 2008 or latest available data and the World Bank's *World Development Indicators*, 2007 or latest available data.
- Ability of women to rise to positions of enterprise leadership: Source is the World Economic Forum's Executive Opinion Survey 2010. Survey question is as follows: "In your country, do businesses provide women the same opportunities as men to rise to positions of leadership? (1 = no, women are unable to rise to positions of leadership; 7 = yes, women are often in management positions)".

Basic Rights and Social Institutions

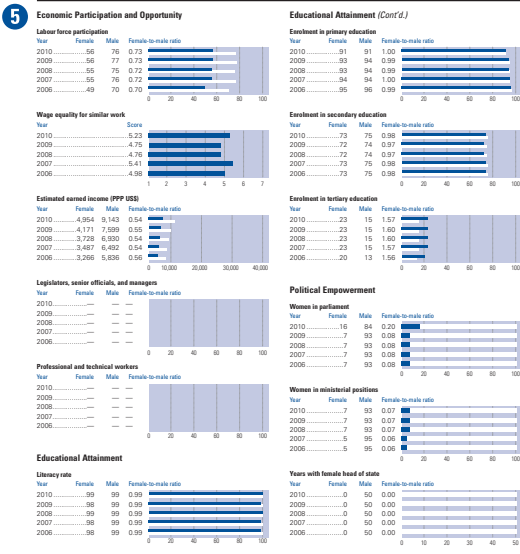

- Paternal versus maternal authority, female genital mutilation, polygamy and the existence of legislation punishing acts of violence against women: Source of all these variables is the OECD's *Gender, Institutions and Development Data Base 2009* (accessed July 2010). The numbers are on a 0-to-1 scale, where 1 is the worst possible score and 0 the best possible score.

Albania 2006–2010

Rank	Score (0-100)	Inequality (100 = equal)

Country Profiles: Evolution 2006–2010

The second page of the Country Profiles shows selected data over a five-year period, presenting an overview of trends for countries included in the Global Gender Gap Index over the years 2006–2010. It shows the evolution of each country's ranking, score, subindex and indicators. Only countries with at least four years of consecutive data (including 2010) have been analysed in this section. For any countries not fulfilling these conditions, the second page of the Country Profile has been left blank.

The health and survival subindex (sex ratio at birth and healthy life expectancy) does not figure in this analysis of evolution over time because the data source for this particular subindex has been updated only in 2010 and therefore it is not yet possible to discern any significant trends. For the 12 indicators analyzed in this year's edition, raw data from 2006 to 2010 (female values, male values and female-to-male ratio) have been identified.

Page 2 of the Country Profiles covers only the indicators that constitute the Index. It does not include the Key Indicators or the Additional Data that are contained in the Country Profiles page 1.

The evolution of the data from 2006 to 2010 is presented by subindex.

4 The first section presents the following information:

- The evolution of the overall performance of countries in the Global Gender Gap Index from 2006 to 2010, measured by changes in rank and score on a 0-to-1 scale.
- A graph depicting the evolution of countries' performance across the four subindexes on a 0-to-1 scale.

5 The second section provides a more detailed analysis of evolution in each country's female value, male value and female-to-male ratio across the 12 indicators selected from *The Global Gender Gap Report* over the past five years.

- For each of the variables included in this section, column one displays the year, column two displays the female value, column three shows the male value and column four displays the female-to-male ratio.
- The bar charts visually display the female and male values for each of the 12 variables, allowing the reader to clearly identify whether the female-to-male ratio is above or below the equality benchmark and how each value has evolved over time. All indicators are measured on a scale from 0 to 100 except for wage equality for similar work, which is based on a 1-to-7 scale, and estimated earned income, which has a scale of 0 to 40,000 US dollars. A maximum of US\$40,000 has been designated as the cut-off point in order to be consistent with the Index methodology.

-
- In the ratios, values above 1 (the equality benchmark) favour women and values below 1 favour men. Please note that the equality benchmark is set at 1 for all variables except for sex ratio at birth (0.944) and healthy life expectancy (1.06).
 - For all enrolment indicators: in some cases, data were available for the overall female-to-male ratio but not for the separate male and female values.
 - Tertiary education: In the very rare cases where male or female enrolment rates are below 0.5%, the male and female values may appear as 0.
 - Heads of state: In cases when a female head of state was elected for a period shorter than six months, the female value appears as 0 due to rounding. However, the female-to-male ratio may differ from 0. This was the case for Bulgaria during the period 2006 to 2010, for example.

The data displayed are the latest available data during the year of publication; data have not been updated retrospectively. In some cases, a static situation (no progress or deterioration) may indicate the current situation in a particular country; in other cases, it may indicate that data for that country were not regularly renewed and instead the latest available data were reported over multiple years in international databases.

About the Authors

Ricardo Hausmann is Director of Harvard's Center for International Development and Professor of the Practice of Economic Development at the John F. Kennedy School of Government. Previously, he served as the first Chief Economist of the Inter-American Development Bank (1994–2000), where he created the Research Department. He has served as Minister of Planning of Venezuela (1992–93) and as a member of the Board of the Central Bank of Venezuela. He also served as Chair of the IMF–World Bank Development Committee. He was Professor of Economics at the Instituto de Estudios Superiores de Administracion (IESA) (1985–91) in Caracas, where he founded the Center for Public Policy. He holds a PhD in Economics from Cornell University. Professor Hausmann's research interests include issues of growth, macroeconomic stability, international finance and the social dimensions of development. He did pioneering work on the causes of macroeconomic volatility in developing countries and studied its effects on growth, poverty and inequality. He also studied the role of budgetary and political institutions in achieving fiscal balance and the role of foreign currency debts in causing economic crises. Professor Hausmann has made important contributions to the study of the "resource curse". More recently, his growth diagnostics methodology, designed to identify the binding constraints to growth in countries, has been adopted widely by multilateral organizations, and his breakthrough research on the patterns of change in productive structures is informing countries' industrial policies around the world. Professor Hausmann developed the methodology of the World Economic Forum Global Gender Gap index, which looks into areas of health, education, economic participation and political power; he is also the co-author of the annual *Global Gender Gap Report*.

Laura D'Andrea Tyson is the S.K. and Angela Chan Professor of Global Management at the Haas School of Business at the University of California Berkeley. She served as Dean of the London Business School from 2002 to 2006, and as Dean of the Haas School of Business, University of California at Berkeley, from 1998 to 2001. Dr. Tyson is a member of President Obama's Economic Recovery Advisory Board. She served in the Clinton Administration and was the Chair of The Council of Economic Advisers (1993–95) and the President's National Economic Adviser (1995–96). She is a Senior Advisor at the McKinsey Global Institute, Credit Suisse Research Institute, and The Rock Creek Group. She is a Senior Fellow at the Center for American Progress and a member of the MIT Corporation and National Academies Board on Science, Technology and Economic Policy. Dr. Tyson is on the Advisory Council of the Brookings Institution Hamilton Project and is an Advisory Board member of Newman's Own, Generation Investment Management and H&Q Asia Pacific. She is also a Special Advisor to the Berkeley Research Group and a member of the Committee on Capital Markets Regulation and the National Academies Committee on Research Universities. Dr. Tyson serves as a member of the Boards of Directors of Eastman Kodak Company, Morgan Stanley, AT&T, Silver Spring Networks, CB Richard Ellis, the Peter G. Peterson Institute of International Economics and the New America Foundation. She has written books and articles on industrial competitiveness and trade. She has also written opinion columns for many publications, including *BusinessWeek*, *The New York Times* and the *Financial Times* and she has made numerous television appearances on economic issues.

Saadia Zahidi is Director of Constituent Communities and Head of the Women Leaders and Gender Parity Programme at the World Economic Forum. Her responsibilities include the engagement of women leaders, gender parity groups, religious leaders, NGOs and labour leaders. The Women Leaders and Gender Parity Programme aims to create awareness and catalyze change by benchmarking the global gender gap, promoting dialogue and engaging leaders—women and men—to address the challenges and opportunities involved in narrowing gender gaps. Zahidi instigated and is co-author of the Forum's *Global Gender Gap Report* series. She was previously an Economist with the Forum's Global Competitiveness Programme, where her responsibilities included economic analysis for the *Global Competitiveness Reports*, *Arab World Competitiveness Reports* and other topical and regional studies. Zahidi holds a cum laude BA degree in Economics from Smith College, Massachusetts, USA and an M.Phil in International Economics from the Graduate Institute of International Studies in Geneva, Switzerland.

Project Team

Yasmina Bekhouche is Project Associate for the Women Leaders and Gender Parity Programme at the World Economic Forum. Her responsibilities include the production of *The Global Gender Gap Report* and regional gender gap reviews as well as organizing community activities at the World Economic Forum's annual meetings and regional summits. She previously worked at the Foreign Affairs Division of the Swiss Federal Administration. Bekhouche holds a Master in International Relations from the Graduate Institute of International Studies in Geneva, Switzerland. Her interests include social issues, diversity and diplomacy.

Marc Cuénod is the Team Coordinator of the Constituent Communities at the World Economic Forum. His responsibilities include the coordination among the following communities at the Forum: women leaders, gender parity groups, religious leaders, NGOs and labour leaders. Cuénod has previously contributed to *The Corporate Gender Gap Report 2010*, *The Global Gender Gap Report 2009* and *The India Gender Gap Review 2009*. He formerly worked in the hotel management industry in Madagascar and as an assistant consultant in a hospitality consulting company. Cuénod holds a Bachelor of Science in International Hospitality Management from the Ecole Hôtelière de Lausanne, Switzerland.

Eimear Farrell is a Community Manager with the Constituent Communities Team at the World Economic Forum and contributed to *The Corporate Gender Gap Report 2010*. Farrell formerly worked as an Assistant to the European Group of Human Rights Institutions and has held several positions in the NGO sector. She has also worked at the Irish Department of Justice and in the Irish Department of Foreign Affairs, as well as spending short periods at the European Commission and in the European Parliament. She holds a BA in English and French from Trinity College Dublin and a Master of Arts in European Studies from University College Dublin. In addition, she has studied at the European Inter-University Centre for Human Rights and Democratisation in Venice and at the Ludwig Boltzmann Institute for Human Rights in Vienna.

The World Economic Forum would like to thank Bahrain Mumtalakat Holding Company, Booz & Company, Coca-Cola, Ernst & Young, HCL, Heidrick & Struggles, Manpower Inc., McKinsey & Company, NIKE, the Olayan Group and the Renault-Nissan Alliance for their invaluable support of the Women Leaders Programme and this Report.

MUMTALAKAT
BAHRAIN INVESTMENTS

Bahrain Mumtalakat Holding Company is the investment arm of the Kingdom of Bahrain. Established in June 2006 by Royal Decree, Mumtalakat now manages a portfolio of around US\$ 10 billion, focused primarily in Bahrain. Mumtalakat is an active shareholder and investor in diverse business and industry sectors in 35 commercial enterprises, nationally and internationally, from aluminium production to property development, tourist sites to food production and transport to telecommunication.
www.mumtalakat.bh

booz&co.

Booz & Company is a leading global management consulting firm, helping the world's top businesses, governments and organizations. Its founder, Edwin Booz, defined the profession when he established the first management consulting firm in 1914. Today, with more than 3,300 people in 60 offices around the world, Booz & Company brings foresight and knowledge, deep functional expertise and a practical approach to building capabilities and delivering real impact. Booz & Company works closely with its clients to create and deliver essential advantage through strategic insight and operational fitness.
www.booz.com

The Coca-Cola Company

The world's largest beverage company. Along with Coca-Cola, recognized as the world's most valuable brand, the Company markets four of the world's top five soft drink brands, including Diet Coke, Fanta and Sprite, and a wide range of other beverages, including diet and light soft drinks, waters, juices and juice drinks, teas, coffees, energy and sports drinks. Through the world's largest beverage distribution system, consumers in over 200 countries buy the company's beverages at a rate exceeding 1.6 billion servings each day.

The Renault-Nissan Alliance, created in 1999, is a unique partnership of five brands that sold more than six million units and achieved a 9.8% global share in 2009. The Alliance employs 350,000 employees and is active in 190 markets. Renault and Nissan are run as separate companies but united through cross-shareholding, a shared focus on results-driven synergies, cross-cultural management and respect for individual brand and corporate identities. In 2010, the alliance launches the first of eight planned electric vehicles, leading the drive toward sustainable zero-emission mobility. With five battery production plants and electric vehicle manufacturing in six countries, the Alliance intends to be the first to mass market a full range of zero-emission vehicles. The Alliance has agreements with over 60 cities, states and countries that are working to establish the infrastructure and market conditions that will help make electric vehicles affordable and convenient.
